1. Introduction

1.1 Purpose of the Vision Document

This Vision Document defines the purpose, scope, stakeholders, high-level capabilities, and core success criteria for “**HR System — MediConsult**”, a web-based Human Resources Management System (HRMS) tailored to the needs of MediConsult (a software development company).

The purpose of this document is to:

- Provide a concise, shared understanding of what the product will deliver and why.
- Capture primary user needs and the major features required to satisfy them.
- Serve as the basis for agreement among Product Management, HR stakeholders, the Project Team, and Senior Management before the detailed requirements and design phases begin.
- Guide prioritization, planning, and acceptance criteria for the initial release and subsequent versions.

Audience: Product managers, HR representatives, department managers, development and QA teams, system administrators, and executive sponsors.

Scope: High-level objectives, product overview, core features, user types, and references. Detailed functional requirements, technical specifications, and UI designs will be produced in follow-on documents (SRS, UX prototypes, and Implementation Plan).

1.2 Product Overview

Product name: HR System — MediConsult

Product type: Web-based HR Management System (SaaS-style internal application or on-premise deployment depending on MediConsult preferences).

Short description: A complete electronic HR system to manage the full employee lifecycle and all routine HR activities for MediConsult, including:

- Employee master data management (personal, contractual, job, salary, history)
- Attendance & time tracking (manual entry, fingerprint device integration, external API)

- Leave & permission workflows (request → approval → balance management → audit trail)
- Periodic performance reviews and appraisal records
- Promotions, transfers, and position management
- Penalties, rewards, and disciplinary records
- Resignation/termination workflows and final entitlements calculation
- Dashboards and reports (attendance, leave, performance, KPIs)
- Role-based access control and audit logging

Primary benefits:

- Streamlines and automates HR operations, reducing manual effort and errors.
- Provides transparent, auditable HR workflows and decisions.
- Delivers actionable reporting for managers and executives.
- Improves employee experience (self-service for requests and records).
- Scales with company growth while keeping HR overhead low.

Initial release (MVP) focus: Employee records, attendance integration, leave workflows, approvals, basic evaluations, and essential dashboards. Payroll integration and advanced analytics are planned for later releases.

1.3 References

Use the following documents and sources when elaborating requirements, design, and implementation:

INTERNAL / PROJECT REFERENCES

- MediConsult HR Policy Document (version & date)
- MediConsult IT Infrastructure Standards
- Company Org Chart and Department Definitions
- Current Attendance Device API Documentation
- Existing HR Forms / Templates (Leave form, Resignation form, Evaluation templates)

STANDARDS & BEST PRACTICES

- **ISO/IEC 27001:** Information security controls for data protection.
- **Local Labor Law:** To ensure compliance on leaves, termination, and entitlements.
- **OWASP Top 10:** For web application security considerations.
- **GDPR:** If personal data of EU citizens is processed.

Note: Replace placeholder links and contact information with actual documents and people during the document review cycle.

2. User Description

2.1 User / Market Demographics

The HR System is developed for internal use in **MediConsult**. The user base includes employees across different departments, managers, HR specialists, and executive decision-makers.

- **Number of users:** Initial deployment expected for 50–300 employees, scalable as the company expands.
- **Technical background:** Most users possess medium to high computer literacy. Administrative HR users may require a simplified interface.
- **Operational culture:** Values process transparency, digital automation, and data-driven decision-making.
- **Usage frequency:**
 - Employees: 1–5 times per week.
 - Managers: 3–10 times per week.
 - HR & Admin: Daily, heavy usage.
 - Executives: Weekly/Monthly (dashboards).

2.2 User Profiles

PROFILE 1 – EMPLOYEE

- **Role:** Standard user

- **Responsibilities:** Submit leave/permission requests, monitor attendance/balances, review personal profile.
- **Motivations:** Fast processing of requests; self-service access to information.

PROFILE 2 – DEPARTMENT MANAGER

- **Responsibilities:** Review/approve requests, conduct evaluations, monitor team KPIs.
- **Motivations:** Reduce administrative workload, improve team visibility.

PROFILE 3 – HUMAN RESOURCES (HR) TEAM

- **Responsibilities:** Manage master data, logs, reviews, promotions, resignations, and reporting.
- **Motivations:** Eliminate paperwork, ensure accurate calculations, maintain audit trails.

PROFILE 4 – SENIOR MANAGEMENT

- **Responsibilities:** Track performance, analyze reports, strategic decision making.
- **Motivations:** Access to real-time insights and actionable data.

PROFILE 5 – SYSTEM ADMINISTRATOR

- **Responsibilities:** System configuration, access control, security, and monitoring.
- **Motivations:** Maintain a reliable, secure, and fully operational system.

2.3 User Environment

- **Platform:** Web-based (accessible via Desktop, Laptop, Tablet, Mobile).
- **Browsers:** Chrome, Firefox, Edge, Safari.
- **Integration:** Biometric time attendance devices and internal Active Directory (optional).

2.4 Key User Needs

- **Employees:** Simple UI, instant submission of requests, transparency of approvals.
- **Managers:** Central dashboard for approvals, clear team KPIs, auditable history.
- **HR Team:** Unified platform, automated calculations (balances/lateness), versioned history,

flexible reporting.

- **Senior Management:** Real-time dashboards, trend analysis (turnover/productivity).
- **Admin:** Config control, security, log monitoring.

2.5 Alternatives and Competition

Currently, MediConsult manages HR operations using manual workflows and spreadsheets.

1. **Manual Tracking (Current):** Low cost but high error rate, time-consuming, and hard to audit.
2. **Off-the-Shelf Software (e.g., SAP, Zoho):** Fast deployment but expensive, limited customization, and potential integration issues.
3. **Custom HR System (Proposed):** Tailored workflows, high flexibility, direct hardware integration, and scalability, though requires development time.

3. Product Overview

3.1 Product Perspective

The HR System is a new enterprise-level web application designed to automate and streamline all human resources processes within MediConsult. It serves as a core business tool, integrating with internal databases and attendance hardware to replace manual paperwork.

3.2 Product Position Statement

For MediConsult management and HR teams who require accurate, automated, and transparent human resource operations, the HR System is a complete solution that centralizes data and automates workflows. Unlike manual processes, this system ensures accountability and better decision support.

3.3 Summary of Capabilities

- Employee information management

Attendance and departure tracking

- Leave management (request, approval, balance tracking)
- Permission requests and emergency leave
- Promotions, transfers, penalties, and rewards management
- Performance evaluation and periodic reviews
- Resignation and end-of-service calculation
- Multi-level dashboard reporting and analytics
- Access control and role-based permissions
- Integration with biometric attendance devices

3.4 Assumptions and Dependencies

Assumptions: Stable internet connectivity, accurate data entry by HR, and end-user computer literacy.

Dependencies: External attendance hardware APIs, hosting environment (cloud/on-prem), and authentication services.

3.5 Cost and Pricing

While final pricing is TBD, costs will be driven by development time, integration complexity, and hosting. The model may be a one-time enterprise license or a hybrid subscription model.

4. Feature Attributes

4.1 Priority Levels

- **Must Have:** Critical features required for system operation.
- **Should Have:** Important features adding value, but not critical for MVP.
- **Nice to Have:** Optional features for future releases.

4.2 Quality Attributes

- **Usability:** Intuitive interface requiring minimal training.
- **Reliability:** Accurate processing with minimum downtime.
- **Performance:** Fast loading and optimized database queries.
- **Security:** Role-based access, data protection, and secure login.
- **Scalability:** Supports company growth (users/branches).
- **Auditability:** Full transaction logs for all decisions.

5. Product Features

5.1 Employee Management (Must Have)

Create and update employee records; store personal data, contracts, salary, and history.

5.2 Attendance and Departure (Must Have)

Track daily in/out times; calculate worked hours, lateness, and overtime; import logs from devices.

5.3 Leave Management (Must Have)

Submission workflows, manager approvals, balance deductions, and transaction history.

5.4 Permission and Short Leave (Should Have)

Quick permission requests, approvals, and logging.

5.5 Promotions and Transfers (Should Have)

Record job changes and department movements with automatic history updates.

5.6 Penalties and Rewards (Should Have)

Record violations, achievements, and salary impacts.

5.7 Performance Evaluation (Should Have)

Periodic review cycles, templates, rating systems, and historical comparisons.

5.8 Resignation and End-of-Service (Should Have)

Record termination/resignation, calculate settlements, and close profiles.

5.9 Reporting and Dashboards (Must Have)

Real-time KPIs for attendance, leave, and performance; PDF/Excel export.

5.10 System Administration (Must Have)

User role management, permission controls, and company structure management.

6. Exemplary Use Cases

6.1 USE CASE: SUBMIT A LEAVE REQUEST

Actor: Employee

1. Employee opens Leave Request form, selects type/dates/reason.
2. System checks balance.
3. Request submitted to manager.
4. Manager approves/rejects.
5. System updates balance and logs transaction.

6.2 USE CASE: APPROVE LEAVE REQUEST

Actor: Manager

1. Manager views pending requests and reviews details/balances.

2. Manager approves or rejects.
3. System notifies employee and logs approval.

6.3 USE CASE: RECORD ATTENDANCE VIA DEVICE IMPORT

Actor: HR Staff

1. HR imports logs from fingerprint device/API.
2. System parses/validates records.
3. Lateness/Overtime calculated; missing entries flagged.

6.4 USE CASE: EMPLOYEE PERFORMANCE REVIEW

Actor: Manager / HR

1. Manager opens evaluation form for employee.
2. Scores entered for criteria; overall rating calculated.
3. HR views aggregated trends.

6.5 USE CASE: GENERATE HR DASHBOARD REPORT

Actor: Senior Management

1. Manager accesses dashboard.
2. System displays trends (Attendance, Utilization, Performance).
3. Manager exports charts.

7. Other Product Requirements

7.1 Applicable Standards

- **GDPR/Privacy:** Protect sensitive data.
- **ISO/IEC 27001:** Encryption and access control.
- **HR Policy:** Logic must follow MediConsult internal policies.

- **ISO 9241:** Usability standards.

7.2 System Requirements

- **Client:** Modern browsers (Chrome, Firefox, Edge). Responsive mobile design.
- **Server:** Windows/Linux Server, .NET 6+, SQL Server/PostgreSQL.
- **Hardware:** Quad Core, 16GB RAM, 200GB+ Storage (Typical).
- **Network:** Stable LAN/WAN, HTTPS/SSL.

7.3 Licensing & Security

- **Security:** RBAC, complex passwords, encryption (rest/transit), full audit trails.
- **Installation:** Supports On-Premise or Cloud (Azure/AWS).

7.4 Performance Requirements

- **Response Time:** Pages load < 2s; Reports < 10s.
- **Availability:** 99% uptime target.
- **Scalability:** Support 100+ concurrent users.
- **Retention:** Minimum 5 years history.

8. Documentation Requirements

8.1 User Manual

Comprehensive PDF guide covering login, leave submission, attendance viewing, manager approvals, and HR workflows.

8.2 Online Help

Contextual tooltips, embedded FAQs, and searchable topics directly within the application.

8.3 Technical Documentation

Installation guides, database setup, API integration details, and configuration wizards.

8.4 Labeling

Versioning (e.g., v1.0), licensing terms, and support contact info.

9. Glossary

Attendance Log

A digital record of employee check-in and check-out times, whether manually recorded or imported from biometric devices.

Audit Trail

A chronological record of system actions and decisions, enabling traceability of changes and approvals.

Dashboard

A visual interface displaying key statistics, charts, and performance indicators related to HR activities.

Department Manager

A user responsible for managing a team and approving requests such as leave and permissions, as well as conducting performance evaluations.

Employee Lifecycle

The complete journey of an employee from joining the company to termination or resignation, including promotions, evaluations, and final settlements.

Fingerprint/Attendance Device

Biometric hardware used to track employee attendance, connected via file import or API.

Role-Based Access Control (RBAC)

A security model where system access is granted based on user role and organizational permissions.

Workflow

A controlled sequence of steps defining how requests or HR processes move through approval and processing stages.
